B.Tech. 6th Semester Project Phase–1 23CSE399

Rubrics, Marks Distribution and Assessment Criteria

This document presents the evaluation rubrics, marks distribution, and review-wise assessment criteria for the B.Tech. 6th Semester Project Phase--1 (January 2026).

It outlines the expectations for Approval, Progress, and External Reviews, guide evaluation components, tentative review schedules, and mandatory instructions to be followed by all student teams throughout the project duration.

Evaluation Pattern: 70: 30

Mark Distribution:

Internal Evaluation	: 40 Marks
Evaluation by the Guide	: 30 Marks
External Evaluation	: 30 Marks

Course Objectives

- The initial stage of the academic project involves identification of a problem domain and demonstrating a sound knowledge on the chosen domain.
- This phase offers students an opportunity to delve into the state-of-the-art within their chosen domain.
- During this phase, students are empowered to identify real-world applications within their chosen domain of study. This enables them to gain insight into their own strengths and innovate problem statements that align with practical scenarios.

Course Outcomes

At the end of this course, the students will be able to:

CO1	Identify ongoing developments in the chosen domain and demonstrate technical knowledge pertaining to the same.
CO2	Define a problem and carry out a thorough study on the chosen problem.
CO3	Identify the research gap in the chosen area and effectively summarize research findings.

Review 1(Approval)

Criterion	Team / Individual	Max Marks	High (75–100%)	Medium (50–74%)	Low (0–49%)
Literature Review Quality (based on minimum 10 papers from last 4 years) & Open questions/gaps in the literature	Individual	6	Very clear understanding of the literature & gaps clearly identified	Moderate understanding & obvious gaps are identified	Superficial / minimal understanding
Problem Definition & Objectives	Team	3	Very well defined	Some ambiguity	Poorly defined
Proposed Methodology & Feasibility	Team	4	Feasible plan, clear methods, correct tools	Partially feasible, lacking clarity	Unrealistic or unclear methodology
Impact & Utility	Individual	2	Clear understanding of the impact and utility	Moderate understanding	Poor understanding
Total		**15**			

Review 2 Progress

Criterion	Team / Individual	Max Marks	High (75–100%)	Medium (50–74%)	Low (0–49%)
Technical Progress – Phase 1 (progress as per the plan proposed in the zeroth review)	Team	7	Progress as per the plan proposed in the zeroth review	Partial progress; some modules incomplete	Minimal progress; major delays
Technical Progress – Final (achievement of objectives)	Team	7	All objectives presented in the zeroth review are achieved	More than half of the objectives are achieved	Less than half of the objectives achieved

Result Analysis & Inference	Individual (VIVA)	**6**	In-depth analysis and meaningful inference	Moderate analysis and reasonable inference	Poor analysis and poor inference
Presentation Quality	Team	**3**	Good	Moderate	Low
Individual Contribution (measured based on VIVA)	Individual	**2**	High	Medium	Low
Total		**25**			

Guide Marks

Criterion	**Max Marks**	**High (75–100%)**	**Medium (50–74%)**	**Low (0–49%)**
Paper	15	High quality draft submitted on or before external review	Moderate quality draft submitted on or before external review	Low quality draft submitted on or before external review
Commitment, Meetings & Deadlines	10	Always prepared; punctual; delivers on time	Irregular but acceptable	Poor attendance; missed deadlines
Project Report Quality	5	Clear, original, complete	Acceptable with gaps	Poor structure; copied; incomplete
Total	**30**			

Review 3

(External)

Criterion	**Max Marks**	**High (75–100%)**	**Medium (50–74%)**	**Low (0–49%)**
Literature Review Quality & Open questions/gaps in the literature	5	Very clear understanding of the literature & gaps clearly identified	Moderate understanding & obvious gaps are identified	Superficial /minimal understanding
Problem Definition & Objectives	3	Very well defined	some ambiguity	poorly defined

Proposed Methodology	3	Feasible plan, clear methods, correct tools	Partially feasible, lacking clarity	Unrealistic or unclear methodology
Result Analysis & Inference	8	In depth analysis and meaningful inference	Moderate analysis and reasonable inference	Poor analysis and poor inference
Impact & Utility	2	Clear understanding of the impact and utility	Moderate understanding	Poor understanding
Presentation	4	Good	Moderate	Low
Individual Contribution (measured based on VIVA)	5	High	Medium	Low
Total	**30**			

Review Tentative Schedule

- **Review 1 (Approval):** February – 1st Week
- **Review 2 (Progress):** March – 4th Week / April – 1st Week
- **Review 3 (External):** May – 4th Week *(after completion of end-semester course evaluations)*

Project Instructions

1. **Team Formation:**
   Each project team shall consist of 3 to 4 students. Upon formation, every team will be assigned a unique Team ID, which must be retained and used consistently throughout all three phases of the project.

2. **Official Communication:**
   All communications from the Project Coordinators will be made only through official email and/or the designated WhatsApp group. Students are expected to check their Outlook email and WhatsApp group at least 2–3 times daily. Claims of missed or overlooked communications will not be entertained. Team members must ensure that information is effectively shared within the team.

3. **Meetings with Project Guide:**
   For every meeting with the project guide, Minutes of Meeting (MoM) shall be prepared and emailed to the guide, with all team members marked in CC.

4. **Team Conduct and Contribution:**
   Teams are expected to work **cordially and collaboratively**. Each team member must contribute constructively to the project. Any internal conflicts or differences of opinion should be resolved within the team; unresolved issues may be escalated to the project guide.

5. **Communication with Coordinators and Panel:**
   All emails addressed to the Project Coordinators and PANCC must include the Team ID in the subject line and all team members and the project guide in CC. Emails not adhering to this format will be considered invalid and will not be acted upon.

6. **Review Presentation Compliance:**
   All teams must present on the scheduled review date; failure to do so will attract a penalty of 2 marks.

7. **Review Presentations:**
   Review presentations will be permitted only after obtaining mandatory approval from the project guide via email. A screenshot of the guide's approval email must be included as the second slide in every review presentation.

8. **Project Outcome Expectation:**
   Students are strongly encouraged to undertake projects that result in an end-to-end functional product, as this is increasingly valued by recruiting organizations.

9. **Planning and Scheduling:**
   While project work may involve multiple parallel tasks, effective planning, task allocation, and scheduling are essential to ensure timely and successful completion of the project.
